

NOVAYA

10 REASONS

why you should
choose latex

WHAT DREAMS ARE MADE OF

A good sleep is vital for overall health and wellbeing, playing a critical role in physical, mental and emotional functioning. To enjoy a revitalizing sleep, it's critical people can change their position unhindered when sleeping. Contrary to what many people think, sleep is not passive: body and mind remain fairly active. A healthy sleeper should therefore be able to move freely during his sleep. The less muscle labour needed for that, the better the quality of sleep and the fitter the sleeper will feel in the morning.

Latex mattresses stand out as a top choice for supporting this need. Known for their sustainability, unparalleled support, and exceptional durability, latex ensures that movement during sleep is effortless. Novaya's products harness the power of natural latex, offering everything from 100% latex to hybrid blends. Here are ten reasons why you should choose latex.

01 / PROGRESSIVE COMFORT

Latex mattresses offer a unique combination of softness and support. The superior elasticity of the material ensures that our products conform perfectly to the natural curves of your body, providing excellent spinal alignment and relieving pressure points around the shoulders, hips and back. It's natural resilience offers resistance to the sleeper's weight and adapts instantly to any movement. Latex is truly the best option for ultimate comfort.

02 / BREATHABILITY

Our latex has an open-cell structure made up of millions of tiny interconnected microscopic air bubbles. More than ensuring a very flexible mattress, this also promotes constant air circulation. Natural movement during sleeping helps to ventilate the mattress, allowing optimal airflow and temperature regulation throughout the night. Latex does not retain heat, making it perfect for hot sleepers.

03 / HYPOALLERGENIC

Latex is naturally resistant to dust mites, mould and mildew, which are known to be common allergy triggers. The unique open-cell structure of latex foam promotes optimal airflow, keeping a mattress fresh and dry by preventing moisture build-up. In addition, the dense structure of latex makes it difficult for dust mites to penetrate or survive — as proven by the Morton Thiokol Research and Development Institute (Report No. 87-304) and Centexbel (Report No. 8276 ISO 10993-5).

For those with latex sensitivities, there's no need to worry. Our latex undergoes a special process during production that eliminates most allergy-causing proteins responsible for allergic reactions.

04 / UNDISTURBED REST

Latex is an elastic material that excels at isolating motion. It reduces disturbance caused by your partner's movements, ensuring an uninterrupted night's sleep.

05 / UNMATCHED DURABILITY

Latex mattresses are renowned for their exceptional durability, as they maintain their shape and comfort for years. Tests carried out by the LGA Möbelprüfinstitut show that latex loses only a minimal amount of its original height and firmness, and has a high resistance to sagging. Investing in latex means investing in a reliable solution for your sleep, for years to come.

06 / NATURAL RAW MATERIAL

Latex is derived from the sap of the tropical rubber tree (hevea brasiliensis), making it a natural and renewable resource. Natural latex is extracted through a sustainable process called tapping. Skilled workers carefully make incisions in the bark of the rubber tree to preserve the overall health of the tree. After tapping, the tree has time to re-bark and heal before tapping it again.

07 / MINIMAL USE OF CHEMICALS

The production of natural latex foam involves fewer chemicals compared to the manufacturing processes of synthetic foams. Natural latex is typically produced with organic and eco-friendly materials and a minimal use of additives, which reduces chemical emissions and supports a healthier indoor environment. For our efforts we obtained the OEKO-TEX® and eco-INSTITUT certifications.

08 / PREMIUM QUALITY

Novaya latex is an excellent product that elevates any sleep experience. And we have proven it. The LGA label we obtained shows that the latex passes strict quality checks. Our products are also thoroughly inspected during every step of the manufacturing process, guaranteeing a high-quality product.

Our certifications:

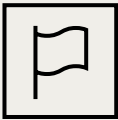

09 / A SUSTAINABLE CHOICE

There are several reasons why our latex products are a sustainable choice. Firstly, rubber trees are known to absorb carbon dioxide from the atmosphere, combating global warming. We also reuse all our post-industrial waste material, and we recycle around 98% of our water. The remaining percentage evaporates and cannot be recovered. Some of our products have been awarded the Nordic Swan Ecolabel, which focuses on climate, a toxin-free circular economy, biodiversity and health.

10 / DIFFERENTIATION AND MARKET DEMAND

Latex sets itself apart from the competition, allowing manufacturers to create a unique selling proposition. As consumers become increasingly aware of the benefits of latex, there is a growing demand for bedding products that incorporate this natural material. By offering latex-based options, manufacturers can differentiate themselves in the market and attract a niche customer base.
